PROJECTS

1. SMART IRRIGATION SYSTEM FOR PLANT USING IOT

This project automatically waters plants using IoT technology. A soil moisture sensor continuously measures the moisture level in the soil. When the soil becomes too dry, the microcontroller (ESP32/Arduino with Wi-Fi) automatically turns ON the water pump and stops it once the soil is sufficiently moist.\n\nThe system is connected to the internet, allowing users to monitor moisture levels and control the pump remotely through a mobile app or web dashboard.
